Professional Summary

Backend Engineer with 6 plus years of experience building AI powered applications and scalable user facing products. Expertise in Node.js TypeScript NestJS PostgreSQL and Redis. Strong product sense with proven ability to work hand in hand with frontend engineering and design teams to deliver and maintain features. Experience integrating LLM APIs including OpenAI and Anthropic for AI features. Skilled in analyzing metrics with data teams after launching features to evaluate outcomes and define next steps. Track record in early stage 0 to 1 product development on AWS and GCP. Relentless and motivated engineer driven to succeed with work as core part of purpose.

Education

RNS Institute of Technology	Bangalore, India
Bachelor of Engineering in Electrical and Electronics	2015-2018
MEI Polytechnic	Bangalore, India
Diploma in Electrical and Electronics	2012-2015

Technical Skills

- **Backend Technologies:** Node.js, TypeScript, NestJS, Python, Django, FastAPI, REST APIs, GraphQL
- **AI and ML:** LLM APIs OpenAI Anthropic, RAG pipelines, Semantic Search, AI Copilot, Claude integration
- **Databases:** PostgreSQL schema design indexing performance tuning, Redis caching, MongoDB, MySQL, DynamoDB
- **Cloud Platforms:** AWS Lambda API Gateway Kinesis RDS S3 EKS CDK, GCP, cloud native architecture
- **Frontend Collaboration:** React, Next.js, TypeScript, JavaScript, working hand in hand with design teams
- **DevOps and Tools:** Docker, Kubernetes, Terraform, GitHub Actions CI CD, automated deployment pipelines
- **Product Development:** Early stage 0 to 1 experience, Metrics Analysis, Agile Scrum, Microservices, Event driven systems

Experience

Lead Software Engineer, Akkodis India Pvt Ltd Client Stellantis *Nov 2023 - Present*

- Built backend services with Node.js TypeScript and NestJS delivering user facing components for AI powered automotive platform
- Integrated LLM APIs from OpenAI and Anthropic to deliver AI features for vehicle intelligence and user interactions
- Worked hand in hand with frontend engineering team using React TypeScript to deliver and maintain product features
- Engineered scalable backend systems with PostgreSQL and Redis achieving 99.9 percent uptime for large scale data pipelines
- Applied Redis caching for high frequency queries reducing latency and improving user experience significantly
- Deployed cloud native services on AWS Lambda Kubernetes RDS API Gateway reducing infrastructure costs by 25 percent
- Sat together with data team after launching features to analyze metrics evaluate outcomes and define next steps
- Automated CI CD pipelines using GitHub Actions cutting release time by 30 percent
- Demonstrated product sense by identifying user needs and translating them into backend architecture decisions

Lead Software Developer, BLP Industry.AI *Sep 2020 - Oct 2023*

- Delivered early stage 0 to 1 product development for AI powered energy management and analytics solutions
- Built backend systems with Node.js TypeScript Python and NestJS style modular architecture patterns
- Integrated AI and ML features including semantic search and predictive analytics for energy optimization
- Worked hand in hand with frontend engineering and design teams to deliver user facing components
- Designed and optimized PostgreSQL databases and implemented Redis caching improving system throughput by 35 percent
- Led delivery of 10 plus cloud native applications on AWS and GCP in early stage startup environment
- Analyzed metrics with product and data teams after feature launches to evaluate performance and iterate based on outcomes
- Collaborated with design to deliver intuitive user experiences aligned with product goals and user needs

Senior Developer, Montaine Smart Business Solutions *Mar 2019 - Sep 2020*

- Built backend architecture for Leadmirror AI marketing platform with Node.js Python Django and PostgreSQL
- Integrated AI features for SEO optimization lead generation and keyword scraping using machine learning algorithms
- Worked hand in hand with frontend team building React dashboards for marketing analytics and campaign insights
- Implemented REST APIs and backend services to support user facing product features with strong product sense
- Designed PostgreSQL database schema ensuring scalability and performance for growing user base
- Delivered product features in early stage startup environment with focus on user experience and business value

Projects

SquadBrain Multi Tenant RAG Knowledge Hub *Current Project*

- Built early stage 0 to 1 AI product with RAG pipelines and semantic search for knowledge management
- Developed backend services using Node.js TypeScript and NestJS architecture patterns with LLM APIs from OpenAI and Anthropic
- Designed and implemented PostgreSQL database and Redis caching for multi tenant data isolation and performance

- Integrated GitHub and Jira APIs with real time collaboration features using CRDTs via yjs for RFC editing
- Worked hand in hand with frontend team to deliver user facing components and maintain AI powered features
- Deployed on AWS and Kubernetes with OpenTelemetry monitoring OAuth SSO and analytics dashboard
- Analyzed user metrics after feature launches to evaluate outcomes and iterate based on data driven insights
- **Technologies:** Node.js, TypeScript, NestJS, PostgreSQL, Redis, AWS, Kubernetes, OpenAI API, Anthropic API, RAG, Semantic Search

ADA Connected Vehicle Platform

Current Project

- Developed end to end connected vehicle platform with ADA Web React TypeScript ADA Server Python and ADA Client for vehicle telemetry
- Built backend services with Node.js TypeScript and Python on AWS cloud infrastructure enabling vehicle to cloud data transmission
- Designed scalable APIs using PostgreSQL and Redis serving user facing web application for real time vehicle monitoring
- Deployed cloud native services with AWS Lambda API Gateway Kinesis RDS S3 and CDK for infrastructure as code
- Worked hand in hand with frontend engineering team to deliver and maintain telemetry visualization features
- Sat with data team to analyze user metrics after feature launches evaluate outcomes and define product iterations
- Achieved 99.9 percent uptime and reduced infrastructure costs by 25 percent through optimization and efficient architecture
- **Technologies:** Node.js, TypeScript, Python, PostgreSQL, Redis, AWS Lambda, API Gateway, Kinesis, RDS, CDK, React

Conserve.AI Energy Management System

Production System

- Delivered early stage 0 to 1 product with AI powered energy management backend built on Node.js Python Django and PostgreSQL
- Integrated AI and ML features for predictive analytics and real time energy optimization cutting costs significantly
- Implemented Redis caching and PostgreSQL optimization for high performance data processing at scale
- Worked hand in hand with frontend team to deliver user facing dashboards and analytics components
- Deployed hybrid cloud on premise system on AWS and GCP with monitoring metrics analysis and alerting
- Analyzed feature performance with data team to drive product decisions iterate and improve user experience
- **Technologies:** Node.js, Python, Django, PostgreSQL, Redis, MongoDB, AWS, GCP, AI ML, React

Trust.AI Vision Analytics Platform

Production System

- Built real time video analytics platform with AI and ML for surveillance anomaly detection and predictive insights
- Developed backend services with Node.js TypeScript and Python integrating computer vision and machine learning models
- Designed PostgreSQL and MongoDB databases for storing video metadata analytics results and user configurations
- Implemented Redis for caching and real time data processing reducing latency for video stream analysis
- Worked with frontend team to deliver user facing dashboards for monitoring alerts and predictive analytics visualization
- **Technologies:** Node.js, TypeScript, Python, PostgreSQL, MongoDB, Redis, AI ML, Computer Vision

Leadmirror Marketing AI Tool

Production System

- Built AI powered marketing platform for SEO optimization lead generation and keyword scraping with machine learning
- Developed backend architecture with Node.js Python Django and PostgreSQL ensuring scalability for growing user base
- Implemented REST APIs connecting AI features to frontend React dashboards for campaign analytics and insights
- Applied product sense to design features that drove user engagement and delivered measurable business value
- Worked hand in hand with design team to deliver intuitive user facing components for marketing workflows
- **Technologies:** Node.js, Python, Django, PostgreSQL, Redis, AI ML, REST APIs, React

Additional Information

Languages: English fluent, German proficient

Work Philosophy: Relentless and motivated with drive to succeed. Work is core part of identity and purpose. Thrives in flat structures and early stage 0 to 1 environments. Proven A player with exceptional track record.
