

AKSHAY R K

SENIOR FULL STACK DEVELOPER • RUPPINER CHAUSSEE 211, BERLIN, 13503, GERMANY

DETAILS

Ruppiner Chaussee 211, Berlin,
13503, Germany
akshayrrr18@gmail.com

SKILLS

TypeScript, JavaScript, Python, SQL

React, Next.js, Tailwind CSS,
Bootstrap, HTML, CSS

Node.js, FastAPI, Django, Express,
REST APIs

PostgreSQL, MySQL, Redis,
DynamoDB, MongoDB

AWS, Docker, Terraform, GitHub
Actions, CI/CD

LangChain, OpenAI API, RAG
Pipelines, Vector Databases
(Pinecone, Chroma), LLM
Orchestration, Generative AI
Integration, Claude Code, GitHub
Copilot, Cursor (AI-augmented
development)

Jest, Mocha, Unit & Integration
Testing

GDPR, OAuth2, Encryption,
Authentication Middleware, Secure
API Design

PROFILE

Senior Software Engineer (Python/AWS/Serverless, AI Accelerated) with 7 years of experience designing and scaling data-driven integration and automation systems using Python, AWS, and event-driven architectures. Skilled in building and optimizing high-volume data pipelines, integrating third-party APIs, and implementing cloud-native infrastructure. Experienced with AI-assisted development tools (Claude Code, Copilot, Cursor) to accelerate delivery, testing, and troubleshooting. Passionate about designing reliable backend systems that connect, synchronize, and scale seamlessly. Experience with SQS, SNS, Lambda, ECS, Aurora, FastAPI, event-driven systems, job pipeline ingestion, and 3rd-party integrations.

EMPLOYMENT HISTORY

Lead Engineer at Stellantis India Private Limited, Bengaluru

September 2025 — Present

- Designed and implemented Python-based event-driven systems using AWS Lambda, ECS, and SQS for real-time data integration.
- Built API ingestion pipelines handling millions of telemetry records daily; ensured accuracy and fault tolerance through retry mechanisms and data validation.
- Developed and deployed microservices using FastAPI + PostgreSQL (Aurora equivalent) for ingestion, transformation, and delivery.
- Applied TDD principles by writing pytest unit tests and Postman integration suites to validate event-driven workflows, API behavior, and data pipelines, ensuring high reliability before release.
- Integrated Claude Code and Copilot into engineering workflows to accelerate unit test generation, API mock creation, and deployment readiness.
- Improved system uptime by 35% through asynchronous processing and better exception handling.
- Partnered with cross-functional product and operations teams to ensure seamless end-to-end data delivery between internal and client systems.

Lead Software Engineer at Akkodis India Pvt Ltd. (Client Stellantis), Bengaluru

November 2023 — September 2025

- Built and optimized data ingestion services using Python, AWS SQS/SNS, and DynamoDB, processing high-volume integration events.
- Developed event-driven microservices for job and application data pipelines integrating with third-party APIs.
- Refactored existing ETL processes into serverless Lambda functions to improve cost efficiency and scalability.
- Implemented CI/CD pipelines (GitHub Actions + Terraform) to automate deployment across environments.
- Mentored engineers on asynchronous programming, event streaming, and TDD best practices.

Lead Software Developer at BLP Industry.AI, Bengaluru

September 2020 — October 2023

- Architected Conserve.AI , an energy data platform built with Python, FastAPI, and PostgreSQL , handling IoT data ingestion from distributed devices.
- Integrated Celery-based async pipelines for real-time energy monitoring, notifications, and analytics.
- Deployed scalable services on AWS ECS and Lambda , using SQS for event orchestration and SNS for alerting .
- Designed RESTful APIs and data models to support multi-tenant clients.
- Reduced data latency by 40% through database and query optimization.

Senior Developer at Montaigne Smart Business Solutions, Hyderabad

March 2019 — September 2020

- Built and maintained full-stack web applications using React + Node.js , focusing on UI scalability and API stability.
- Developed RESTful APIs and SQL-based backend logic for CRM systems.
- Worked with Dockerized CI/CD pipelines and conducted QA automation testing.
- Partnered with design teams to enhance UX for enterprise dashboards.

Notable Projects

SquadBrain – Multi-Tenant RAG Knowledge Hub

- Built a Next.js + React knowledge-sharing system for teams, integrating real-time collaboration and AI-powered summaries.
- Implemented modular backend APIs in FastAPI + PostgreSQL, supporting async data workflows.
- Set up Docker-based CI/CD pipelines for multi-environment deployment

ADA – Connected Vehicle Platform

- Developed microservices and UI dashboards using React, FastAPI, and PostgreSQL for real-time data analytics.
- Implemented server monitoring with Grafana and optimized response latency.

Conserve.AI – Energy Management System

- Designed and developed a SaaS analytics system using React, Python, Django, and PostgreSQL.
- Integrated caching with Redis and automated API testing.

Leadmirror – Marketing AI Tool

- Platform for SEO optimization, lead generation, and keyword scraping.
- Implemented backend (Python/Django, Node.js, PostgreSQL) and frontend (React) with dashboards for campaign analytics.

EDUCATION

B.E. Electrical & Electronics Engineering, RNS Institute of Technology, Bengaluru

June 2015 — June 2018
